M850-CTP

Dramatically reduce wiring / installation time of multifunction meters and CTs

- Save time, save money by reducing wiring / installation time
- Eliminate wiring errors
- Substantial labor savings -- estimated at 40% when compared to traditional wiring methods
- Less qualified installers required
- Unique, proven design
- Simple, plug-in design connection for both current and voltage inputs / outputs
- Connect three-phase current transformer to the meter in a snap
- Daisy chain up to 32 meters to a common supply voltage
- No need for terminal shorting blocks
- Increase safety. Internal circuitry limits high voltages if CT is disconnected under load
- M850-CTP has RS485 (MODBUS) or Pulsed Output communication option
- Bright white backlight LCD screen is viewable over a wide area
- M850-CTP is available as meter only, or as a meter and CT set. Supplied with or without cables to suit your requirements.
- CE certified

Save Money! Reduce Labor Time!! Eliminate Wiring Errors!!!

The M850-CTP will save you time and money by reducing the wiring and installation time of multifunction power meters and current transformers. The innovative design allows plug-in connectors to be used for both current and voltage input/output. Substantial labor savings -- around 40% over traditional wiring methods -- will be experienced.

Simply snap one end of the RJ45 lead into the M850-CTP and snap the other end into the three-phase current transformer and you are done. It is that simple!

Wiring errors will also be reduced! The simple, plug-in connections mean greater reliability in your wiring allowing less qualified installers to build your panels...quickly and easily.

Installation safety is improved, too. The internal circuitry of the connections limit high voltages if the current transformer is accidentally disconnected under load.

The input and output voltage connections allow you to connect up to 32 meters in a daisy-chain from a single energy source. Use a linking lead cable from the first meter to connect to the second meter ... and so on ... if you are connecting multiple meters.

The M850-CTP is a great way to further reduce costs and time in your panel building process! Get one and start saving today!
